

VIPER STEALTHTM

The Intelagard Viper Stealth represents the latest in Compressed Air Foam technology encased in an extremely portable, durable and user-friendly package. Housed in a small backpack, this powerful system is the perfect piece of equipment for covert operations and can be used just about anywhere. The Stealth retains all of the capabilities of the Intelagard Macaw on a much smaller and lighter platform, and can be deployed in scenarios that include decontamination, fire suppression and riot control.

The Stealth's fully plumbed, collapsible, refillable and replaceable bladder is available in 1, 1.5 and 2 gallon (3.79, 5.69 and 7.57 L) sizes. Simple controls, powerful agent deployment and minimal maintenance combine to make the Viper Stealth a system with wide end-user appeal.
